Recent Developments in International Energy Policies / Uluslararası Enerji Politikalarındaki Son Gelişmeler

Yusuf Akan¹, Taha Arpa¹¹Atatürk University, Turkey

ABSTRACT

The usage of energy resources is an essential element of human life. Nowadays, most of the problems between countries in the world stem from sharing of the energy resources. Because energy resources are existent in certain areas of the world. Some of these countries which have huge energy reserves evaluated this situation as an opportunity in the context of economy politics in global political arena. On the other hand, the lack of energy reserves countries apply different policies in order to struggle against these problem in global arena. In the context of energy policies, our world is evaluated as have three polars. On the one side, Russia which has huge reserves, on the other side United States and Canada which have certain amount of reserves. The third one is corridor countries such as Turkey and etc. The purpose of this study is to investigate the distribution and the density of the energy resources in the world and also to consider the recent developments energy policies in the world in the context of energy politics.
