The Reality of Sustainable Energy for Sustainable Development in Turkey/ Türkiye’de Sürdürülebilir Kalkınma için Sürdürülebilir Enerji Gerçeği

Zehra Lale¹¹Anadolu University, Turkey

ABSTRACT

Fast increase in the population of the World and industrialization and together with fast development of life standards is increasing the demand for energy day by day. It is thought that the reserves of fossil sources, which are not renewed, whose usage is getting wider day by day with the increasing energy demand, would come to a level which will not be able to meet the need. In our country, environmental worries such as increasing demand for energy, global warming and climate change and that the fossil fuels will have been used up, that the dependency to outside world for energy have caused countries to turn towards different sources. In this study, the place and importance of current energy sources were tried to be determined in terms of the policy of Turkey according to data obtained, by determining on which position our country is about the sustainable energy. In the direction of current data obtain, current condition of energy sources Turkey has, policies that the government has applied about the subject and which methods our country should use to come into a condition that it will be able to utilize these sources have been put forward.

KEYWORDS Sustainability; sustainable development; sustainable energy
