# Role of Sustainable Development for Developing Countries/ Gelişmekte Olan Ülkelerde Sürdürülebilir Kalkınmanın Rolü

Saba Yağcı<sup>1</sup><sup>1</sup>Istanbul University, Turkey

## ABSTRACT

Sustainable growth and development is the main purpose of all countries. Consideration of nature as an unlimited source by humankind; caused environmental problems and not to use the sources effectively. Increase of the world population, natural existing which is on the point of exhausting directed the countries to look for alternative solutions for humankind. By the way sustainable development concept gained importance from the middle of 20th century. Sustainable development approach show up from this solution seeking. Developed and developing countries, attach importance to sustainable growth and developing in order to provide the sources and clean environment to transfer for the next generations. Sustainable growth perceptions and application could be varied according to developing countries and developed countries. Structural problems could be met in the strategies of reaching to sustainable development. Developing countries could reach the sustainable development by applying the structural reforms. Role of sustainable development and concept of sustainable development for developing countries will be analyzed in this study. Difficulties which are possible to come across in the applications of sustainable development will be submitted comparatively.
