ABSTRACT

After 1950, the world economy has gone under a swift globalization process. In this process, borders between countries have disappeared and countries have come closer with one another owing to the increasing volume of trade. With the economic decisions it made on 24 January 1980, Turkey has been trying to adapt itself to the developments in the world by turning from previously adapted import substitution policies to export oriented policies. While Turkish economy has been becoming more open, at the same time economy various economic policies have implemented for ensuring and maintaining domestic economic stability. Some policies could be accepted periodically successful for the economic results. After the first decades of 2000's Turkey became the 16th biggest economy in the world. As of 2013, Turkey's GDP and income per capita reached up to \$820 billion and \$11.277, respectively. However, as the economic gain could not be distributed country-wide. Great share of aggregate economic activities are especially took place in Marmara Region, and this region becomes the center of the Turkish economy with the crowded economic activities. It has become identified with production centers such as, and especially, Istanbul, Kocaeli, and Bursa. Nevertheless, after 1990's rapidly growth of capital and industry in Anatolia have created new dynamic view and evolution for Turkish economy. As a result of this transformation in the economy, size and significance of the business actors and the companies had been changed. In this study, we observe the change of rankings in main business actors and companies which are listed in top rankings and studied in economic researchs. According the our results; the place of the rankings of both biggest industry companies, most admirable firms, most beneficent businessman, most taxpayers businessman and firms etc., had been changed. Our results are derived from significant amount of researchs and try to create a different view to such rankings.
